# Lab report: Summary on detectable sensitizations

#### **POLLEN**

Grass Pollen

Tree Pollen

Weed Pollen

House Dust Mites & Storage Mites

#### **PLANT-BASED FOOD**

Legumes

Grains

**Spices** 

Fruits

Vegetables

Nuts & Seeds

#### **INSECTS & VENOMS**

Ant, Bee, Wasp

Cockroach

#### **MICROORGANISMS**

Fungal Spores & Yeast

#### **ANIMAL-DERIVED FOOD**

Milk

Egg

Fish & Seafood

Meat

#### **EPITHELIAL TISSUES OF ANIMALS**

Pets

Farm Animals

#### **OTHERS**

Latex

Ficus CCD

Parasite

#### Highest measured IgE concentration per allergen group

< 0.3 kUA/L

0.3 - 1 kUA/L

Negative or uncertain

Low IgE level

1-5 kUA/L

Moderate IgE level 5 - 15 kUA/L

High IgE level

> 15 kUA/L

Very high IgE level

ASSAY PERFORMED ON

6/11/2022

APPROVED ON 7/21/2022

# Information to cross-reactive allergens

# **Lipocalins**

Lipocalins show a limited degree of cross-reactivity.

Lipocalins are airborne and easily spread in indoor environments. They are a risk factor for respiratory symptoms and asthma. The impact of individual lipocalin allergens on severity of symptoms is unknown.

## Uteroglobin

Uteroglobins show a limited degree of cross-reactivity.

Uteroglobins are generated in salivary glands and in the skin of some furry animals. Higher levels of sIgE against Uteroglobins were observed in children with asthma to cat.

# Number of tested allergen sources:

165

2

# **GRASS POLLEN**

Bahia grass, Bermuda grass, Common reed, Perennial ryegrass, Rye, Timothy grass

# COCKROACH

American cockroach, German cockroach

#### TREE POLLEN

Acacia, Alder, Arizona Cypress, European Ash, Beech, Cottonwood, Date palm, Elm, Hazel, London Plane Tree, Mediterranean Cypress, Mountain cedar, Mulberry, Olive, Paper mulberry, Silver birch, Sugi, Tree of Heaven, Walnut

## **INSECT VENOMS**

Common wasp venom, Fire ant venom, Honeybee venom, Longheaded wasp venom, Paper wasp venom

# **WEED POLLEN**

Annual mercury, Hemp, Lamb's quarter, Mugwort, Nettle, Pigweed, Ragweed, Ribwort, Russian thistle, Wall pellitory

10

# **FUNGAL SPORES & YEAST**

Alternaria alternata, Aspergillus fumigatus, Baker's yeast, Cladosporium herbarum, Malassezia sympodialis, Penicilium chrysogenum

# **HOUSE DUST MITES & STORAGE**

Acarus siro, American house dust mite, Blomia tropicalis, European house dust mite, Glycyphagus domesticus, Lepidoglyphus destructor, Tyrophagus putrescentiae

# MILK

Camel's milk, Cow's milk, Goat's milk, Mare's milk, Sheep's milk

#### **EGG**

Egg white, Egg yolk

# **EGUMES**

Chickpea, White bean, Lentil, Pea, Peanut, Sou

# FISH & SEAFOOD

20 Anisakis simplex, Atlantic cod, Atlantic herring, Atlantic

mackerel, Black-Tiger shrimp, Brown shrimp, Carp, Common mussel, Crab, Lobster, Northern prawn, Oyster, Salmon, Scallop, Shrimp mix, Squid, Swordfish, Thornback ray, Tuna, Venus clam

#### MEAT

10

Beef, Chicken, Horse, House cricket, Lamb, Mealworm, Migratory locust, Pig, Rabbit, Turkey

# SPICES

Anise, Caraway, Mustard, Oregano, Paprika, Parsley

Cat, Djungarian hamster, Dog, Guinea pig, Mouse, Rabbit, Rat

# **FRUITS**

Avocado, Apple, Banana, Blueberry, Cherry, Fig, Grape, Kiwi, Mango, Muskmelon, Orange, Papaya, Peach, Pear, Strawberry

# FARM ANIMALS

Cattle, Goat, Horse, Pig, Sheep

7

#### VEGETABLES

Carrot, Celery, Garlic, Onion, Potato, Tomato

Latex, Hom s lactoferrin, Pigeon tick, Weeping fig

#### **NUTS & SEEDS**

Almond, Brazil nut, Cashew, Hazelnut, Macadamia, Pecan, Pistachio, Walnut, Fenugreek seeds, Poppy seed, Pumpkin seed, Sesame, Sunflower seed

# **Interpretation - Support**

# Raven Interpretation Summary

## **Sample Information**

The sample was tested on ALEX<sup>2</sup> Barcode O2APD1CC, interpretation date 7/21/2022.

Of the tested 295 allergens, 15 were/was above the cut off of 0.3 kU<sub>A</sub>/L. A sensitisation can be an indicator of an IgE dependent allergy. For all positive ALEX 2 allergens, comments for interpretation guidance are listed below.

## Total IgE: 74 kU/L

The measured total IgE was 74 kU/L. With a total IgE titre of below 100 kU/L, allergy is possible but unlikely.

# **Cross-Reactive allergen sensitisation detected**

Sensitisations against molecular allergens which are markers of (broad) cross-reactivity between different allergen sources were detected.

Detected cross-reactive allergen sensitisations:

• Lipocalins: Can f 1, Can f 4, Can f 6, Cav p 1, Mus m 1

#### Lipocaling

Nearly all members of the Lipocalin allergen family can cause inhalative symptoms like allergic rhinoconjunctivitis and allergic asthma. Lipocalin from pigeon tick is associated with idiopathic nocturnal anaphylaxis. The degree of cross-reactivity varies wildly between members of this family. Some members of the Lipocalin family serve as markers for AIT indication.

#### Tree Pollen

#### Cypress Family

Sensitisation to pollen from the cypress family was detected. Allergic symptoms associated with this allergen source range from allergic rhinoconjunctivitis to allergic asthma.

Cry j 1 is a member for the Pectate Lyase allergen family. The degree of cross-reactivity between different cypress species based on Pectate Lyases is high. Cry j 1 serves as a marker for AIT indication, if corresponding clinical symptoms are present.

Cup a 1 is a member fo the Pectate Lyase allergen family. The degree of cross-reactivity between different cypress species based on Pectate Lyases is high. Cup a 1 serves as a marker for AIT indication, if corresponding clinical symptoms are present.

Causal treatment is possible via AIT, symptomatic treatment includes anti-histamines and corticosteroids in various formulations (tablet, spray).

#### Grass pollen

Sensitisation to grass pollen was detected. Allergic symptoms associated with grass pollen range from allergic rhinoconjunctivitis to allergic asthma.

Cyn d 1, Lol p 1 and Phl p 1 are members for the  $\beta$ -Expansin allergen family. The degree of cross-reactivity between members of this allergen family is very high.  $\beta$ -Expansins serve as markers for AIT indication, if corresponding clinical symptoms are present. Positive results were obtained for: Lol p 1, Phl p 1.

Phl p 5 is a member of the Grass Group 5/6 allergen family. The degree of cross-reactivity between members of this allergen family is high, although not in all grass pollen species a Grass Group 5/6 allergen has been described. Along with Phl p 1 and Phl p 2, Phl p 5 serves as marker of true grass-pollen sensitisation. Phl p 1 and 5 serve as markers for AIT indication, if corresponding clinical symptoms are present.

Phl p 6 is a member of the Grass Group 5/6 allergen family. The degree of cross-reactivity between members of this allergen family is high.

Causal treatment is possible via AIT - Phl p 1 and 5 serve as markers for AIT indication, if corresponding are present. Symptomatic treatment includes anti-histamines and local corticosteroids in various formulations (tablet, spray).

#### Furry Animals

#### Cat

Sensitisation to cat was detected. Allergic symptoms associated with this allergen source range from allergic rhinoconjunctivitis to allergic asthma.

Fel d 1 is a member of the Uteroglobin (UG) allergen family and a marker for genuine cat allergy. Fel d 1 is also serves as a marker for AIT indication, if corresponding clinical symptoms are present. The degree of cross-reactivity between Fel d 1 and other members of the UG allergen family is low to moderate (e.g. Can f Fel d 1 like from dog).

If avoidance of cats is not possible, an AIT can be prescribed. Symptomatic treatment includes anti-histamines as well as local corticosteroids in various formulations (tablet, spray). Avoidance of exposition to cats is strongly recommended.

#### Dog

Sensitisation to dog was detected. Allergic symptoms associated with this allergen source range from allergic rhinoconjunctivitis to allergic asthma.

Can f1 is a member of the Lipocalin allergen family (LC). There is a moderate risk of cross-reactivity with Fel d7, a LC from cat. Can f1 serves as a specific marker for dog sensitisation and as a marker for AIT, if corresponding clinical symptoms are present. The highest concentrations are found in fur and saliva.

Can f 4 is a member of the Lipocalin allergen family (LC). The degree of cross-reactivity to other members of the LC family is very low. A low degree of cross-reactivity has been reported with a related allergen from cattle. Can f 4 is the most abundant allergen in dog fur.

Can f 5 is a member of the Arginine Esterase allergen family. It is a major allergen in male dogs only. Female and castrated dogs do not express Can f 5 in significant amounts. Also, patients sensitised to Can f 5 may react to human seminal fluid.

Can f 6 is a member of the Lipocalin allergen family (LC). The degree of cross-reactivity to other LCs is low, except for a moderate risk to crossreact with Fel d 4 from cat and Equ c 1 from horse.

If avoidance of dogs is not possible an AIT can be prescribed. Symptomatic treatment includes anti-histamines as well as local corticosteroids in various formulations (tablet, spray). Avoidance is strongly recommended.

#### Guinea pig

Sensitisation to guinea pig was detected. Allergic symptoms associated with this allergen source range from allergic rhino-conjunctivitis to allergic asthma, especially when exposure is frequent.

Cav p 1 is a member of the Lipocalin allergen family. The degree of cross-reactivity to other members of this family is low.

AIT for causal treatment may not be available. Symptomatic treatment includes anti-histamines as well as local corticosteroids in various formulations (tablet, spray). Avoidance is strongly recommended.

#### Mouse

Sensitisation to mouse was detected. Allergic symptoms associated with this allergen source range from allergic rhino-conjunctivitis to allergic asthma, especially when exposure is frequent (e.g. in laboratory workers).

Mus m 1 is a member of the Lipocalin allergen familu. The degree of cross-reactivity to other members of this family is low (Exception: Rat n 1 from rat).

AIT for causal treatment may not be available. Symptomatic treatment includes anti-histamines as well as local corticosteroids in various formulations (tablet, spray). Avoidance is strongly recommended.

#### Rat

Sensitisation to rat was detected. Allergic symptoms associated with rat range from allergic rhino-conjunctivitis to allergic asthma, especially when exposure is frequent (e.g. in laboratory workers).

AIT for causal treatment may not be available. Symptomatic treatment includes anti-histamines as well as local corticosteroids in various formulations (tablet, spray). Avoidance is strongly recommended.

#### **Moulds and Yeasts**

#### Alternaria alternata

Sensitisation to spores from Alternaria alternata was detected. Allergic symptoms associated with A. alternata range from allergic rhinoconjunctivitis to allergic asthma. Alternaria alternata is an outdoor fungal species.

Alt a 6 is a member of the Enolase allergen family. Cross-reactions occur between many different mould species based on allergens from the Enolase family.

Causal treatment is possible via AIT, symptomatic treatment includes anti-histamines and local corticosteroids in various formulations (tablet, spray).

DISCLAIMER: THE PRESENCE OF IgE-ANTIBODIES IMPLIES A RISK OF ALLERGIC REACTIONS AND HAS TO BE ANALYZED IN CONJUNCTION WITH THE CLINICAL HISTORY AND OTHER DIAGNOSTIC TEST RESULTS.
